

Information Technology Consulting

The experience and creativity required to adapt industry best practices for the small and medium-sized enterprise.

At VanDercreek Consulting, we achieve our client's business objectives by increasing the value of their infrastructure assets, processes, and resources. Whether enhancing application functionality, ensuring data availability, or enforcing a consistent security policy, our goal is always to maximize the benefit to the organization. Our core competencies include:

- ◆ Apple, Microsoft, Novell, & Red Hat Systems Engineering
- ◆ Cisco Network Engineering
- ◆ Project Management Body of Knowledge (PMBOK) Project Management
- ◆ Security & Systems Management

Information Technology Consulting

Domain expertise and a standards-based approach coalesce to provide our clients trustworthy, professional service.

Background

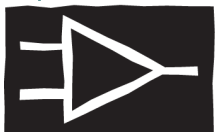

VanDercreek Consulting began in 2002 with a focus on messaging, security, and systems management implementations in large enterprise environments. These clients included market leaders in the credit services, diversified utilities, internet service providers, semiconductor equipment manufacturing, and telecommunication industries. These projects required of our Consultants a depth of knowledge, utilization of standards, adherence to regulations, and an ability to lead “matrixed” technical teams. These efforts resulted in increased productivity, decreased cost, reduced risk, or other earned value to the client.

Mission

This year VanDercreek Consulting is undertaking an evolutionary change. Our focus has shifted to addressing the needs of the small and medium-sized enterprise (SME) yet still providing the large enterprise results. Through adapting large enterprise processes and methodologies for SME requirements, implementation of technology produces predictable, measurable, and lasting results.

Approach

For example, our client might have a business objective to increase productivity and responsiveness through remote access to corporate data and applications. Our approach begins with a project plan and solution design crafted from the business requirements that addressed the people, processes, and tools needed for or affected by attaining this objective. In this case, the Project Management Institute’s PMBOK standard ensures successful planning, execution, and transition of the project while aspects of the Office of Government Commerce’s Information Technology Infrastructure Library (ITIL) standard facilitate a holistic design and enduring solution.

Information Technology Consulting

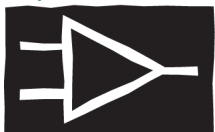

Your business objectives met by our efficient, holistic solutions to amplify IT value.

Direction

Our company's founder, Michael VanDercreek, is passionate about creating positive change for our clients through amplifying IT value. His background in the SME environment includes such dynamic, technology-driven industries as dot-com and software development. This experience has shaped his belief in the importance of efficient implementation of holistic solutions (people, processes, and tools) incorporating proven methodologies. He was also a forerunner in the technical certification training industry as a Certified Novell Instructor and Microsoft Certified Trainer, which has influenced his conviction in the value of personnel development. More recently, Michael has obtained the Project Management Professional certification and implemented the PMBOK standard in our company's processes. This last influence has greatly improved our ability to predict and measure earned value for our clients.

Additional Information

Thank you for your interest in VanDercreek Consulting. We welcome you to learn more about our company and understand how we can benefit you. Please contact us directly for specific questions or browse our website for general information including descriptions of select projects.
